Frost Training and Consulting at 803-359-0765**

**Course Title - ELECTRICAL WORK PRACTICES & ASSURED
GROUNDING PROGRAMS**

This ½ day course covers the OSHA Mandated Requirements for Public Works Department's typical electrical hazards and employee exposures. Emphasis is on working around live electrical components, recognizing electrical hazards, the need for proper lockout-tagout procedures for electrical hazards, and employee protection. Also included is an overview of OSHA's required Assured Grounding Program where employers must ensure that all electrical cords and equipment are inspected on a timely basis for tears, breaks, and damage. Compliance with these two electrical programs will help ensure employees work safely around electrical hazards as well as to minimize OSHA Citations should an inspection occur.
